

WHERE **fun & dentistry** COME TOGETHER

MOUNTING HEIGHTS

How to determine setting the height of your Fun Centers Interactive unit.

- On the bottom of the chart find the average age group of the children you have as clients and follow the vertical line up to where it intersects with the curves.
- Select the percentile curve that best represents your clients and then follow the intersecting horizontal line left.
- Where the horizontal line intersects with the height column will determine our suggested height position of the unit.
- Place the center of the monitor at that height.
